Welcome to this Demo of Spotify for Developers on the Uno Platform using the Fluent Design System from tutorialr.com/talks.

Visual Studio 2019

2

The Demo uses Visual Studio 2019 with the Uno Platform Solution Templates, Spotify for Developers with Spotify.NetStandard and System Icons from the Fluent Design System.

3

The Client Class uses the third-party Spotify for Developers NuGet Package Spotify.NetStandard and supports HttpClient for WebAssembly along with Image and Paging Methods.

4

Then, the Client Class also has a Method for converting the responses from the Spotify Client to the Result Class.

5

Next, the Client Class has Methods for getting Categories, Artists, Albums, Tracks and Playlist Items from the Spotify Client Paging Methods.

6

Also, the Client Class has Generic Methods that wrap all the Paging Methods for Categories, Artists, Albums, Tracks and Playlist Items.

7

Plus, the Client Class has a Generic Method to List everything from the Paging Method. It also has another Generic Method to List everything as a List of Result Class and use this with the List Categories Method.

8

Finally, the Client Class has Methods to List Artists, Albums, Tracks, Playlists and Playlist Items as a List of Result Class along with an Action.

9

The Command Class implements the Methods from the ICommand Interface to allow for Commanding to be used with the Action from the Client Class.

10

The Config Class has the Client Id and Client Secret which can be obtained from the Spotify for Developers Dashboard and will allow the Client Class to use the Spotify Web API.

11

The Result Class represents a Category, Playlist, Playlist Item, Album or Track and includes ResultType for Category, Playlist, Album, and Item which is used for Playlist Items or Tracks. It also has Properties for the Id, Title, Image and Command for Commanding.

12

MainPage includes XAML for a Navigation View with Category, Featured and Released options including use of Fluent Design System Icons. Content includes an Image with a Border using Acrylic Effect from the Fluent Design System for the Background.

13

MainPage also includes XAML for a GridView with an Item Template with a Button which has an Image and a TextBlock using a Fluent Design System Colour along with a Progress Ring to indicate Loading.

14

The Main Page Class uses the Client Class, where the Country is set for Great Britain, there is an Event Handler for Selection Changed of the Navigation View to List Categories for Category, List Playlists for Featured or List Albums for Released plus a Method for Navigation Result.

15

The Main Page Class also sets the Action to the Navigation Result Method to List Playlists, Playlist Items or Tracks and set the Navigation View to the First option for Category.
