

Windows App SDK

Buy me a coffee

Lucky Roshambo

Lucky Roshambo shows how you can create simple **Rock-Paper-Scissors** game or **Roshambo** as it is known in parts of North America, using emoji and with a toolkit from **NuGet** using the **Windows App SDK**.

Step 1

Follow **Setup and Start** on how to get **Setup** and **Install** what you need for **Visual Studio 2022** and **Windows App SDK**.

In **Windows 11** choose **Start** and then find or search for **Visual Studio 2022** and then select it.

Once **Visual Studio 2022** has started select **Create a new project**.

Then choose the **Blank App, Packages (WinUI in Desktop)** and then select **Next**.

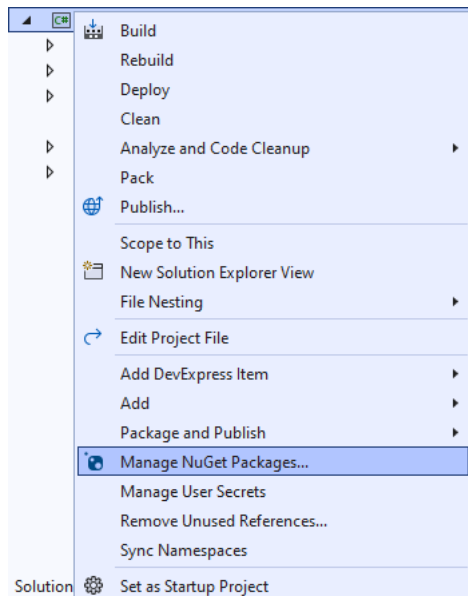

After that in **Configure your new project** type in the **Project name** as *LuckyRoshambo*, then select a Location and then select **Create** to start a new **Solution**.

Step 2

Then in **Visual Studio** within **Solution Explorer** for the **Solution**, right click on the **Project** shown below the **Solution** and then select **Manage NuGet Packages...**

Step 3

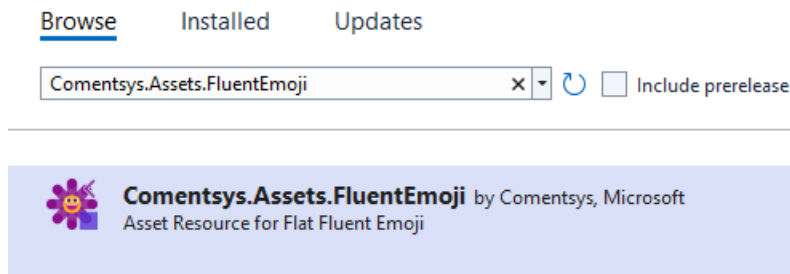

Then in the **NuGet Package Manager** from the **Browse** tab search for **Comentsys.Toolkit.WindowsAppSdk** and then select **Comentsys.Toolkit.WindowsAppSdk by Comentsys** as indicated and select **Install**

This will add the package for **Comentsys.Toolkit.WindowsAppSdk** to your **Project**. If you get the **Preview Changes** screen saying **Visual Studio is about to make changes to this solution. Click OK to proceed with the changes listed below**. You can read the message and then select **OK** to **Install** the package.

Step 4

Then while still in the **NuGet Package Manager** from the **Browse** tab search for **Comentsys.Assets.FluentEmoji** and then select **Comentsys.Assets.FluentEmoji by Comentsys** as indicated and select **Install**

This will add the package for **Comentsys.Assets.FluentEmoji** to your **Project**. If you get the **Preview Changes** screen saying **Visual Studio is about to make changes to this solution. Click OK to proceed with the changes listed below.** You can read the message and then select **OK** to **Install** the package, then you can close the **tab** for **Nuget: LuckyRoshambo** by selecting the **x** next to it.

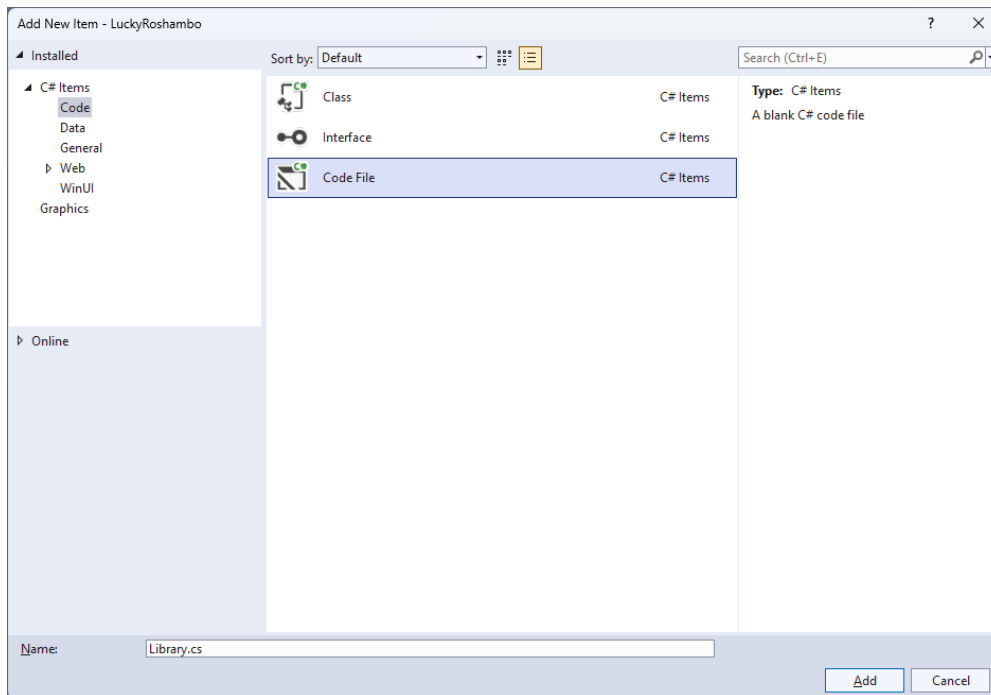

Step 5

Then in **Visual Studio** within **Solution Explorer** for the **Solution**, right click on the **Project** shown below the **Solution** and then select **Add** then **New Item...**

Step 6

Then in **Add New Item** from the **C# Items** list, select **Code** and then select **Code File** from the list next to this, then type in the name of *Library.cs* and then **Click** on **Add**.

Step 7

You will now be in the **View** for the **Code** of *Library.cs*, within this first type the following **Code**:

```
using Comentsys.Assets.FluentEmoji;
using Comentsys.Toolkit.WindowsAppSdk;
using Microsoft.UI.Xaml;
using Microsoft.UI.Xaml.Controls;
using System;

public class Library
{
    private const string title = "Lucky Roshambo";
    private const int size = 3;
    private const int lost = 0;
    private const int win = 1;
    private const int draw = 2;

    private static readonly int[,] _match = new int[size, size]
    {
        { draw, lost, win },
        { win, draw, lost },
        { lost, win, draw }
    };
    private static readonly FluentEmojiType[] _assets = new FluentEmojiType[]
    {
        FluentEmojiType.Rock,
        FluentEmojiType.PageWithCurl,
        FluentEmojiType.Scissors
    };
    private static readonly string[] _values = new string[]
    {
        "You Lost!",
        "You Win!",
        "You Draw!"
    };
    private readonly Random _random = new((int)DateTime.UtcNow.Ticks);
    private Dialog _dialog;

    // Asset & Play

    // Get & New
}
```

The **Class** that has been defined in so far *Library.cs* has **using** for the packages that were added of **Comentsys.Assets.FluentEmoji** and **Comentsys.Toolkit.WindowsAppSdk** amongst others needed. There are also some **const** and **readonly** values for parts of the game such as the **FluentEmojiType** for *Rock*, *Page with Curl* for *Paper* and *Scissors* and to represent the board along with a **Dialog** that will be used to display messages in the game.

Step 8

Still in the **Class** for *Library.cs* after the **Comment** of **// Asset & Play** type the following **Methods**:

```
private Viewbox Asset(int asset) => new()
{
    Width = 100,
    Height = 100,
    Child = new Asset
    {
        AssetResource = FlatFluentEmoji.Get(_assets[asset])
    }
};

private void Play(int option)
{
    int computer = _random.Next(0, size - 1);
    var result = _match[option, computer];
    var content = new StackPanel()
    {
        Orientation = Orientation.Vertical
    };
    content.Children.Add(new TextBlock()
    {
        HorizontalTextAlignment = TextAlignment.Center,
        Text = "Computer Picked"
    });
    content.Children.Add(Asset(computer));
    content.Children.Add(new TextBlock()
    {
        HorizontalTextAlignment = TextAlignment.Center,
        Text = _values[result]
    });
    _dialog.Show(content);
}
```

Asset will be used to get the relevant asset to display the *Rock, Paper* or *Scissors* and **Play** will be used when it is time to see if can beat the selection of *Rock, Paper* or *Scissors* with your own selection and will display a message showing what the result is.

Step 9

While still in the **Class** for *Library.cs* after the **Comment** of **// Get & New** type in the following **Methods**:

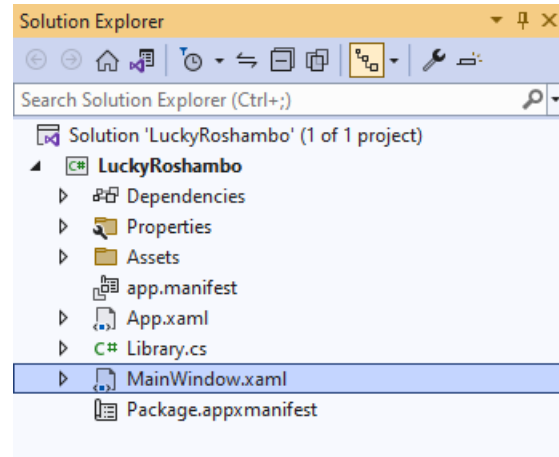

```
private Button Get(int option)
{
    Button button = new()
    {
        Width = 150,
        Height = 150,
        Tag = option,
        Content = Asset(option),
        Margin = new Thickness(5)
    };
    button.Click += (object sender, RoutedEventArgs e) =>
        Play((int)((Button)sender).Tag);
    return button;
}

public void New(StackPanel panel)
{
    _dialog = new Dialog(panel.XamlRoot, title);
    panel.Children.Clear();
    for (int index = 0; index < size; index++)
    {
        panel.Children.Add(Get(index));
    }
}
```

Get is used to obtain a **Button** and set the **Event** for **Click** to use the **Method** for **Play** and **New** is used to create the look-and-feel for the game and to start the game.

Step 10

Then from **Solution Explorer** for the **Solution** double-click on **MainWindow.xaml** to see the **XAML** for the **Main Window**.

Step 11

In the **XAML** for **MainWindow.xaml** there be some **XAML** for a **StackPanel**, this should be **Removed** by removing the following:

```
<StackPanel Orientation="Horizontal"
HorizontalAlignment="Center" VerticalAlignment="Center">
  <Button x:Name="myButton" Click="myButton_Click">Click Me</Button>
</StackPanel>
```

Step 12

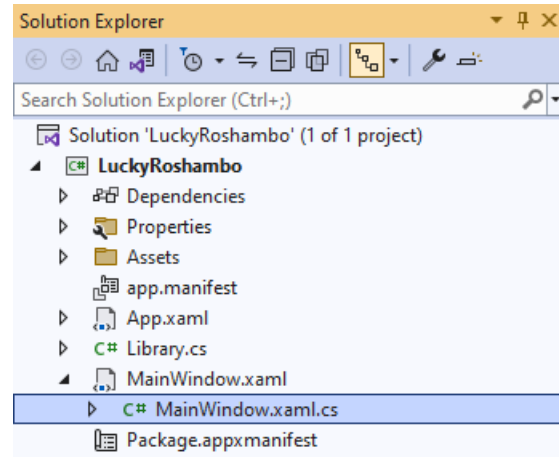

While still in the **XAML** for **MainWindow.xaml** above **</Window>**, type in the following **XAML**:

```
<Grid>
  <Viewbox>
    <StackPanel Margin="50" Name="Display" Orientation="Horizontal"
      HorizontalAlignment="Center" VerticalAlignment="Center" Loaded="New"/>
  </Viewbox>
  <CommandBar VerticalAlignment="Bottom">
    <AppBarButton Icon="Page2" Label="New" Click="New"/>
  </CommandBar>
</Grid>
```

This **XAML** contains a **Grid** with a **Viewbox** which will scale a **StackPanel**. It has a **Loaded** event handler for **New** which is also shared by the **AppBarButton**.

Step 13

Then, within **Solution Explorer** for the **Solution** select the arrow next to **MainWindow.xaml** then double-click on **MainWindow.xaml.cs** to see the **Code** for the **Main Window**.

Step 14

In the **Code** for **MainWindow.xaml.cs** there be a **Method** of **myButton_Click(...)** this should be **Removed** by removing the following:

```
private void myButton_Click(object sender, RoutedEventArgs e)
{
    myButton.Content = "Clicked";
}
```

Step 15

Once **myButton_Click(...)** has been removed, type in the following **Code** below the end of the **Constructor** of **public MainWindow() { ... }**:

```
private readonly Library _library = new();

private void New(object sender, RoutedEventArgs e) =>
    _library.New(Display);
```

Here an **Instance** of the **Class** of **Library** is created then below this is the **Method** of **New** that will be used with **Event Handler** from the **XAML**, this **Method** uses Arrow Syntax with the **=>** for an Expression Body which is useful when a **Method** only has one line.

Step 16

That completes the **Windows App SDK** Application. In **Visual Studio 2022** from the **Toolbar** select **LuckyRoshambo (Package)** to **Start** the Application.

Step 17

Once running you can then press on the first button - **Rock**, the second button for **Paper** or the third button for **Scissors** then you can see what the **Computer** selects to see if you **Win**, **Lose** or **Draw** or you can restart the game by selecting **New**.

Step 18

To **Exit** the **Windows App SDK** Application, select the **Close** button from the top right of the Application as that concludes this **Tutorial** for **Windows App SDK** from tutorialr.com!
